

CLOVER POINT PUMP STATION EXPANSION

The Capital Regional District is progressing a rezoning application with the City of Victoria to allow for improvements and expansion of the existing Clover Point Pump Station.

The Pump Station expansion will be primarily underground and below the grade of the adjacent section of Dallas Road. The expanded facility will include upgraded odour and noise control features.

As part of the Pump Station expansion, the existing split rock wall facing the waterfront will be extended to enable access to the Pump Station and maintain the seaside walkway.

Public Realm Improvements are also proposed at Clover Point Park as part of the rezoning. The proposed improvements will be subject to further community consultation and will include:

- New cyclist and pedestrian viewing plaza on top of the expanded facility.
- New street furniture, bike facilities and a water fountain within this plaza area.
- Sewage connections to enable a public washroom facility.
- Two replanted grassed open spaces to the west and east of the plaza.
- New pedestrian path along the north edge of the zoned area, continuing off-site to the west.
- Pedestrian path and a separated bike path beginning from the north edge of the zoned area, which continues north to connect to Dallas Road.

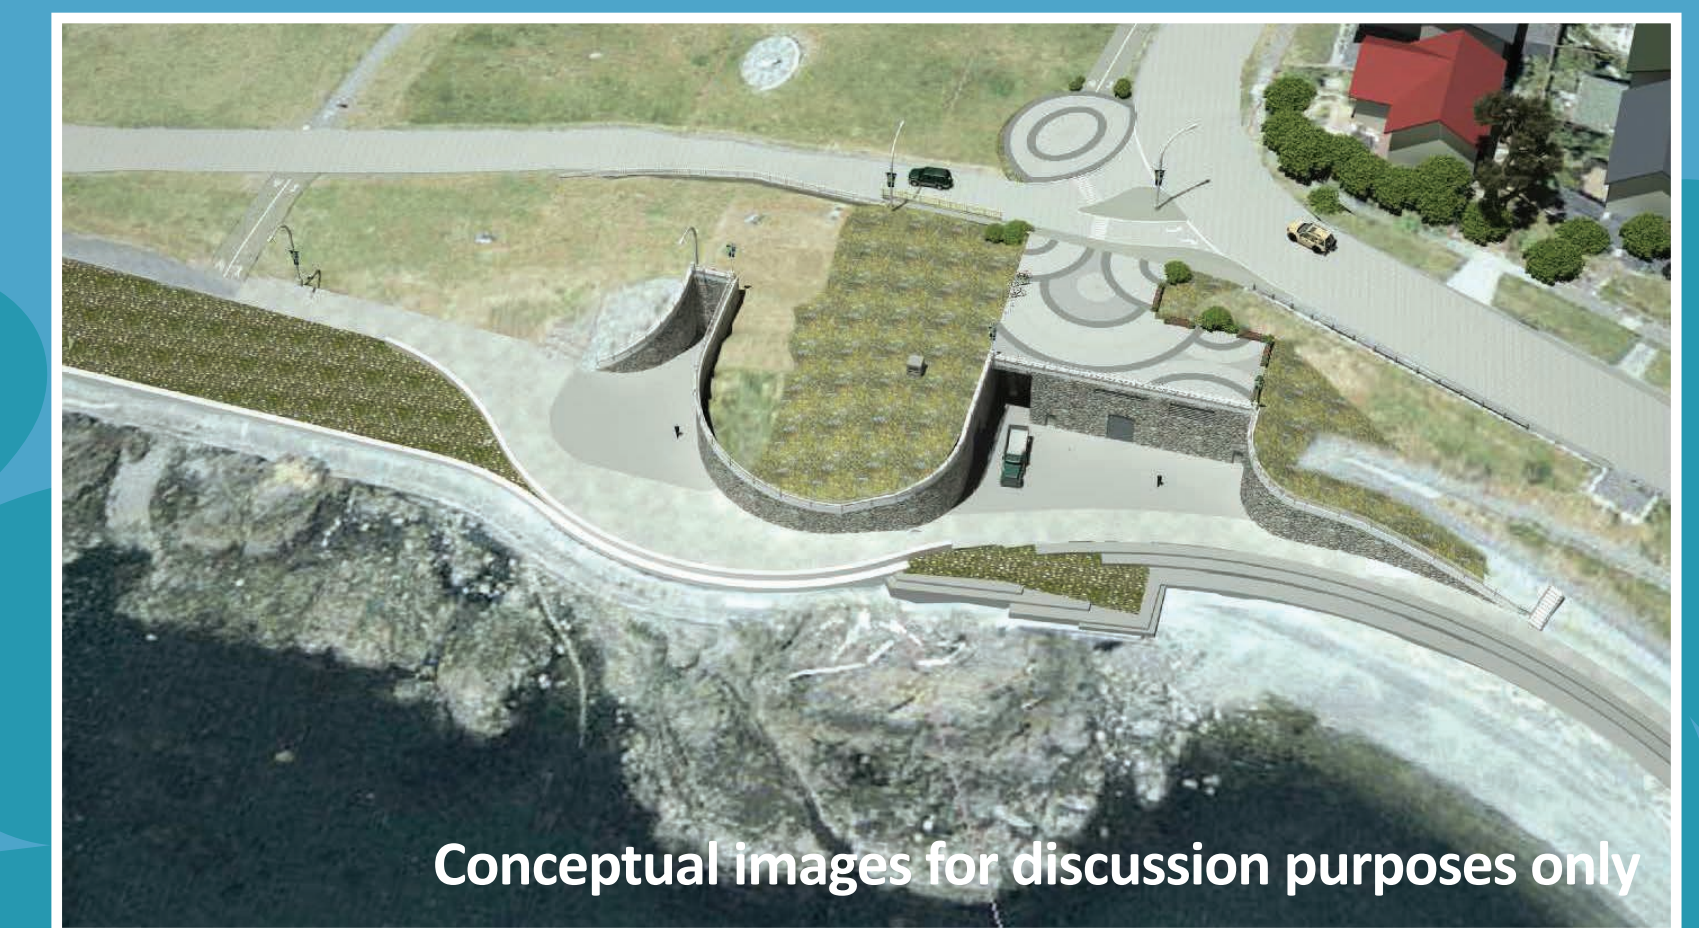

Construction is anticipated to commence in 2017/2018. Further community updates will be provided.

Community Meeting:

You are invited to attend a community public meeting to learn about the rezoning and to give us your feedback:

Date: Wednesday January 11, 2017

Time: 7:00 P.M.

Location: 720 Douglas Street, Saanich Room
Victoria Conference Centre

This application is for the pump station expansion and not the wastewater treatment plant.

Making a difference...together
