These tree removals will take place between and August 9th and September 28th 2018. New trees will be selected and plantings will begin in the fall of 2019.

Caring for Our Urban Forest

Planning for a healthy urban forest is very important to the City of Victoria. We manage 33,000 Cityowned trees, most of which are on 300 kilometers of boulevards and in our 137 parks and open spaces.

In addition to being beautiful, these trees help improve air quality, absorb water during storms and reduce the amount of carbon dioxide in our environment. They also help shade our streets and buildings, helping to cool our city.

Guided by the Urban Forest Master Plan, our arboriculture team develops plans that involve identifying areas for planting new trees to expand the inventory, as well as identifying existing trees that are at the

end of their healthy life. Removing unhealthy trees reduces safety risks and opens up space to plant new, young trees which will grow into our future urban forest.
